

METER REPLACEMENT NOTICE

At NIE Networks we are continually investing to provide a safe and reliable electricity service to all homes and businesses in Northern Ireland. As part of these investment plans, we will be updating one in four electricity meters during 2016-17.* As part of this programme, your meter has been identified for replacement.

Who will carry out this work?

We have appointed **MDE Installations**, **ROL Testing** and **KJM Electrical** to carry out this work on our behalf. All installers will carry identification, wear uniforms and drive marked vehicles.

When will my meter be replaced?

One of the installers will call at your property to change the meter or to arrange a suitable time.

It will take around an hour to install and test your new meter. For our installers to work safely, we will need to turn off the power to your home for approximately 30-40 minutes.

Thank you for your cooperation in advance.
