#StaySafe

Hi, I'm Suzy Sparks

Electricity is very dangerous and can kill you. There are some important things to remember about staying safe around electricity.

NEVER try to climb a pylon or electricity pole.

NEVER climb or throw items into a substation. If your ball gets stuck in a substation or your kite gets stuck in trees close to overhead power lines do not try to get it. Get an adult to call us using the number on the front of the substation gate.

NEVER carry long objects, such as fishing rods, or fly kites or drones where they can touch overhead power lines. Electricity can travel down them and through to you on the ground. This could cause serious burns or electric shocks which can kill you.

ALWAYS be careful when climbing trees. Sometimes trees can grow near overhead power lines and branches can come into contact with them.

Mini pillars are small grey boxes which sit on the pavement or pathways. **NEVER** sit on them, try to open them or poke things inside the mini pillar. The equipment inside is live and you could get an electric shock.

In case of emergency

If someone has received an electric shock, do not touch the person or anything they are touching. There is a chance they may still be in contact with the source of the electricity.

Get an adult to call for help on 999 or 112 and tell the Emergency Services it is an electrical incident.

#StaySafe

Hi, I'm Dr Watt
There are dangers
in this picture.
Can you spot them?

Danger 1: It's very dangerous to climb into a substation!

Hi, I'm Chase Powers
Think you're a bright spark?
Try to find all the words
on our list.
